Tosca Agentic Test Automation (Tosca collabs with AI to create magic)

Tricentis has integrated Agentic Test Automation into Tricentis Tosca which enables Quality Engineering Teams or individual to create modules, test cases and manage end-to-end test suites with ease using simple natural language prompts.

Key Advantages:

→**Natural Language Test Generation**: Mention instructions in plain English, and the agent automatically translates them into executable modules, test steps, and values without manual intervention.

→**Dual Execution Modes**:

- **Co-Create Mode (Default)**: Works like pair programming, executing one step at a time and waiting for your feedback.
- **Autonomous Mode**: Runs sequences end-to-end without manual interruption for rapid test generation.

Big Impact:

→Approximately 85% reduction in manual test creation effort.

→ Up to 60% productivity boost for QA and automation engineers.

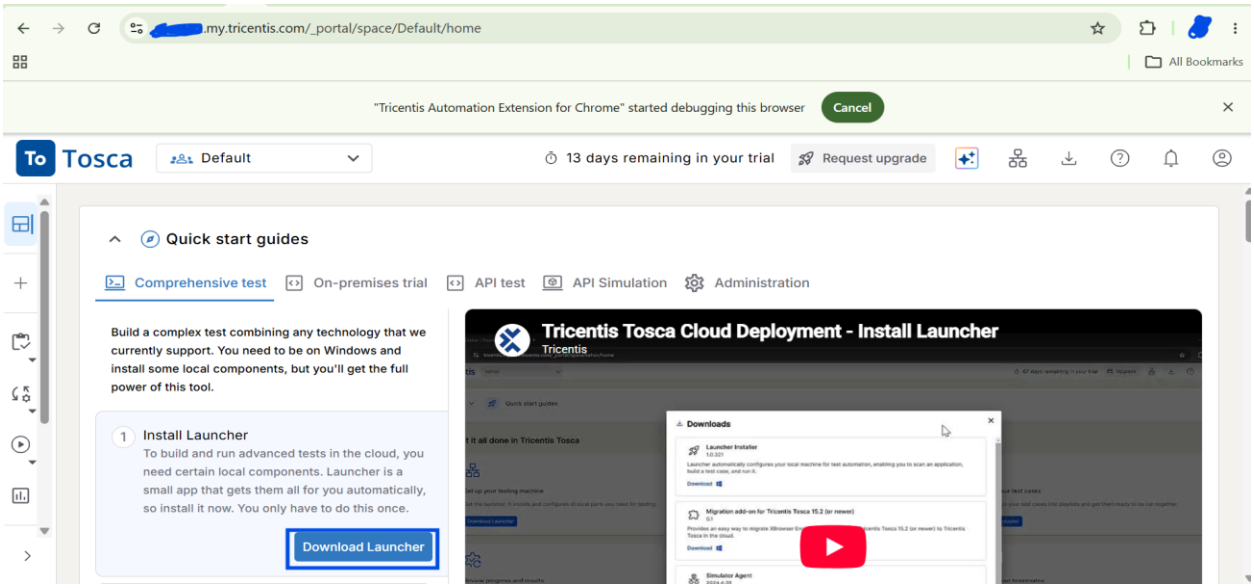

Step by Step process to enable Agentic Test Automation on Tosca Commander (On-Prem).

Pre-requisites:

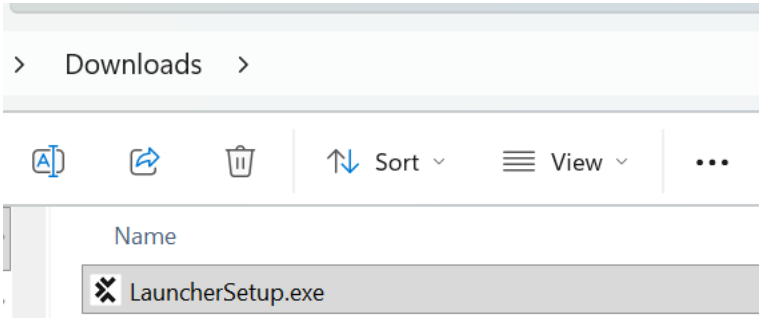

- A Tosca Cloud Tenant account with an execution license to create and use team agents and/or cloud agents.
- A Tosca On-Prem workspace with an on-premise license managed via Tricentis Tosca Server

Version Support Notice: This configuration guide is only applicable for **Tosca 2025.x** and **versions prior to it**. From **Tosca 2026.1** version onwards the process changes significantly.

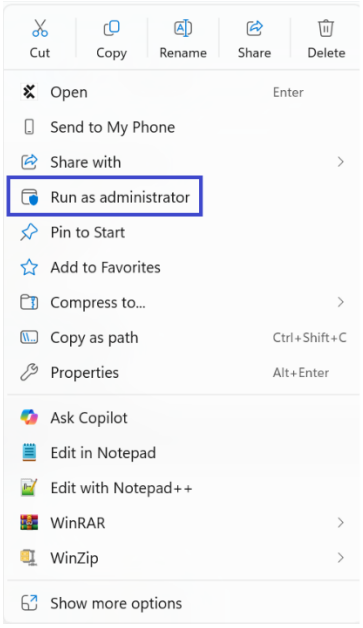

1. On the Tosca Cloud Tenant URL home page, click on Quick start guides, then click on Download Launcher

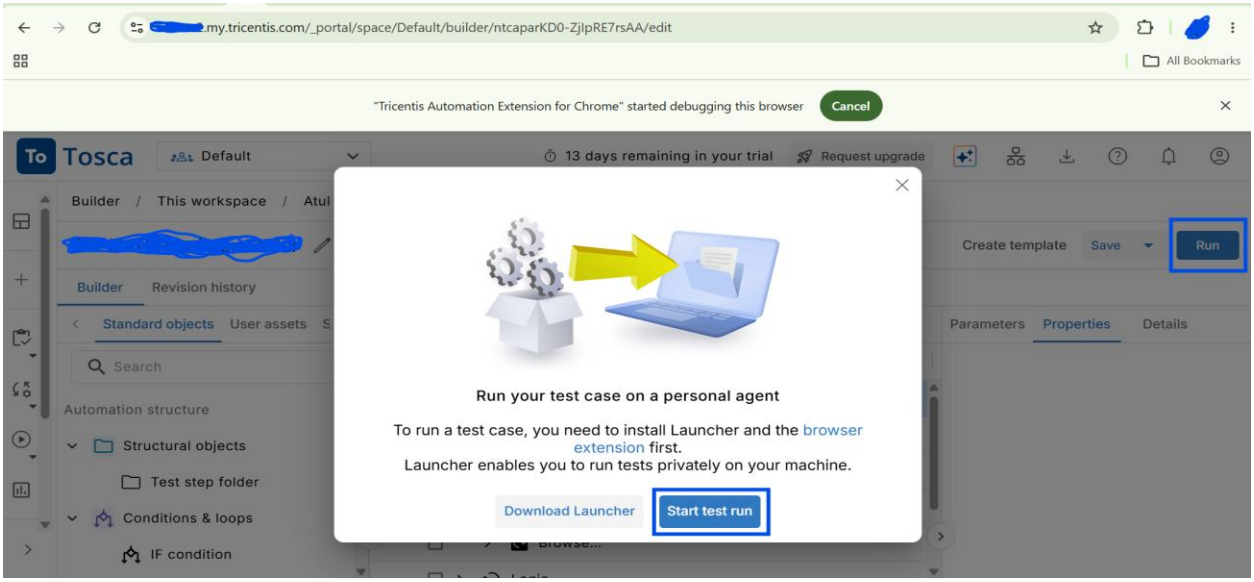

2. LauncherSetup.exe downloaded

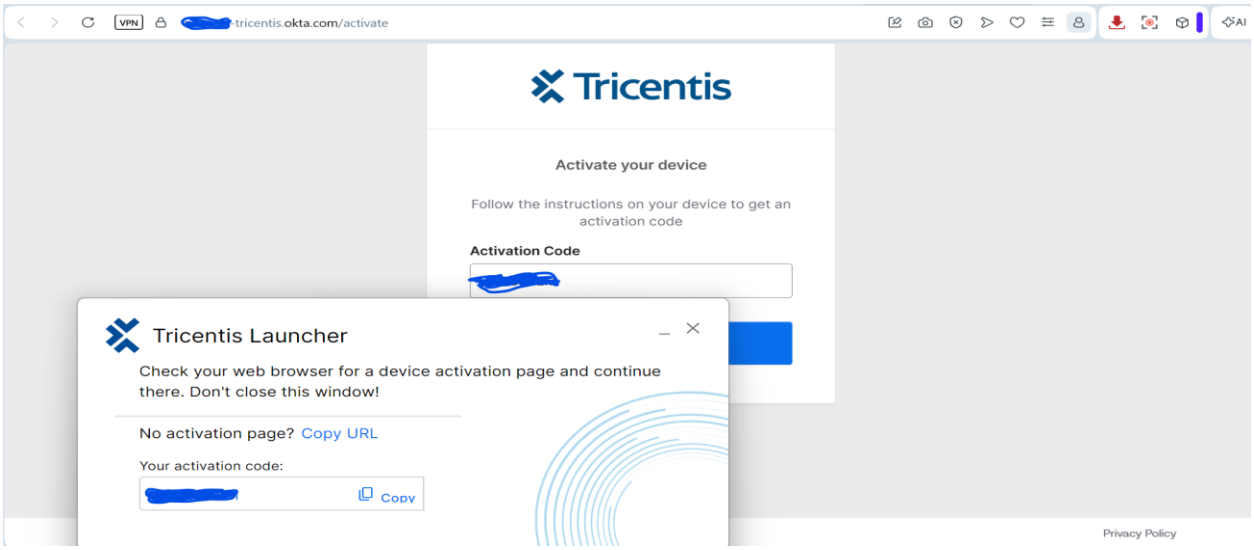

3. Right click on the LauncherSetup.exe file and select Run as administrator to install it

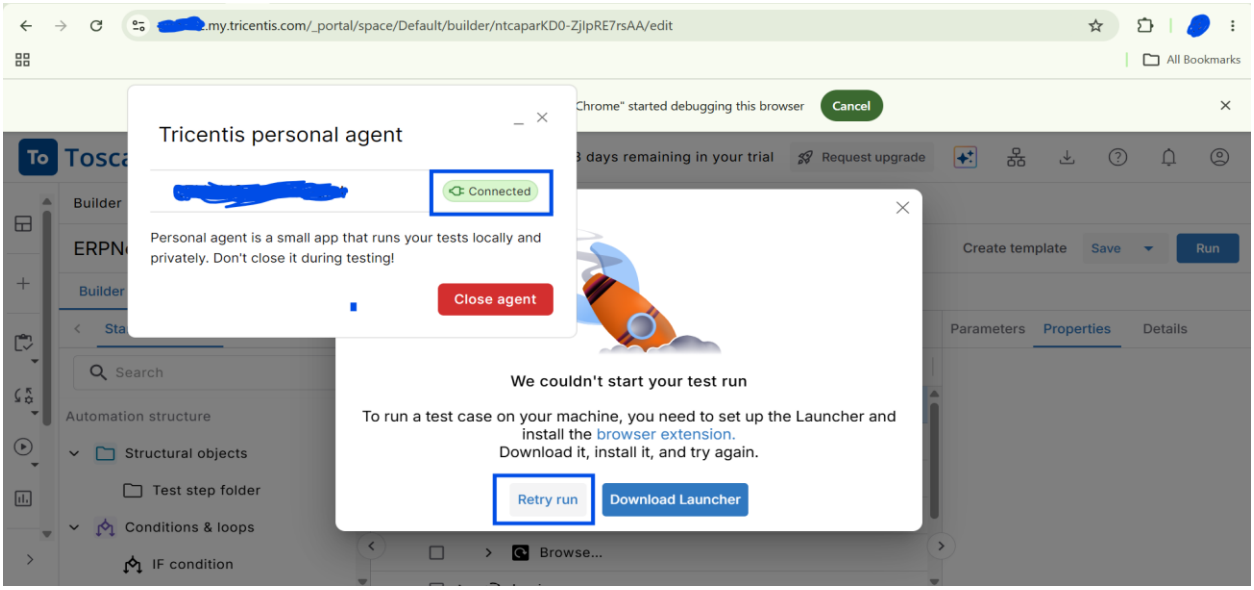

The test scripts on Tosca Cloud are executed through the Launcher

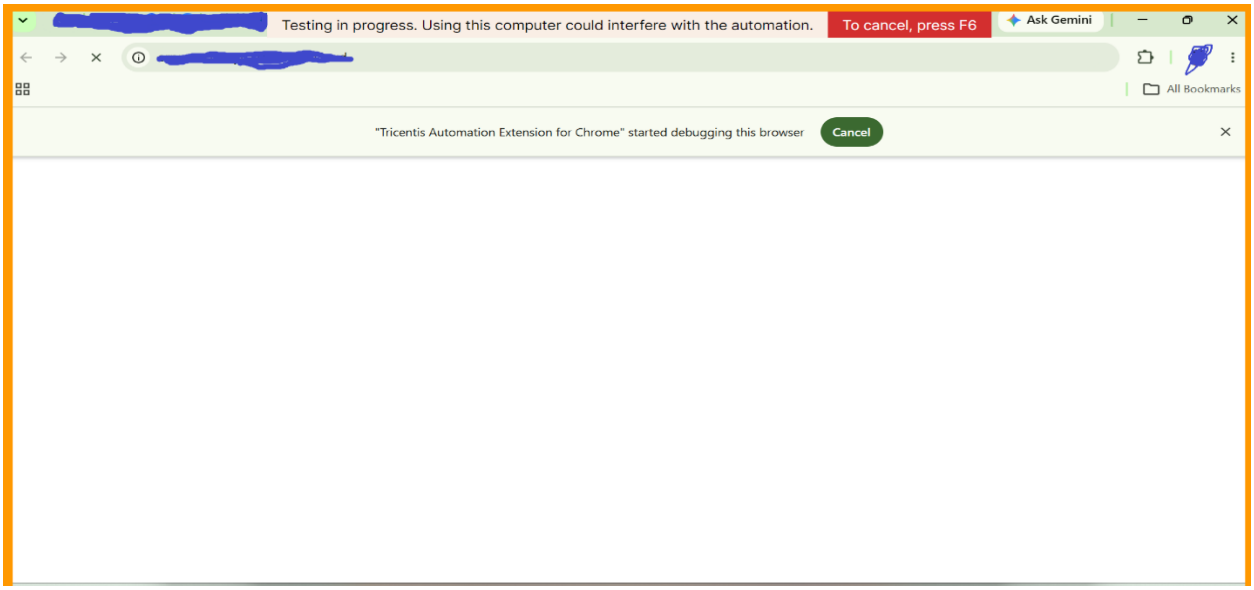

4. Activation Code gets generated on the Tricentis Launcher page. Copy it and use it to activate the launcher

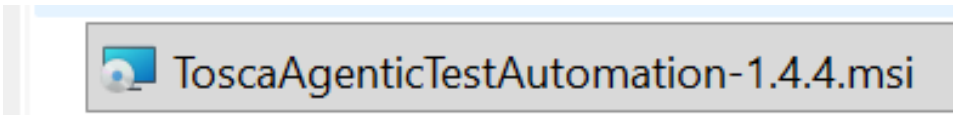

5. The agent is activated. Click on Retry run to re-execute the test case.

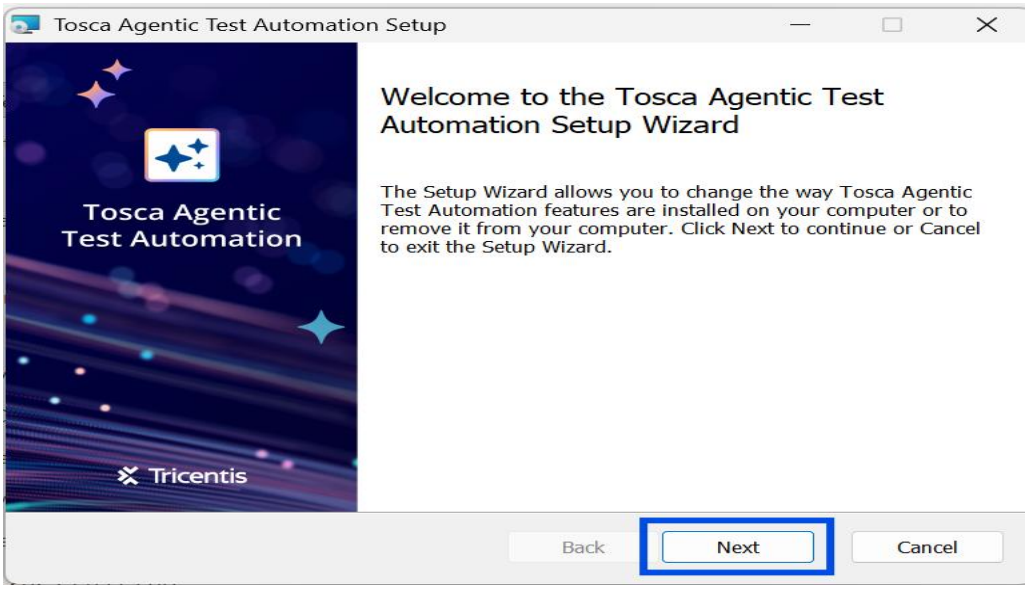

6. Test Execution in progress through Tricentis Agent

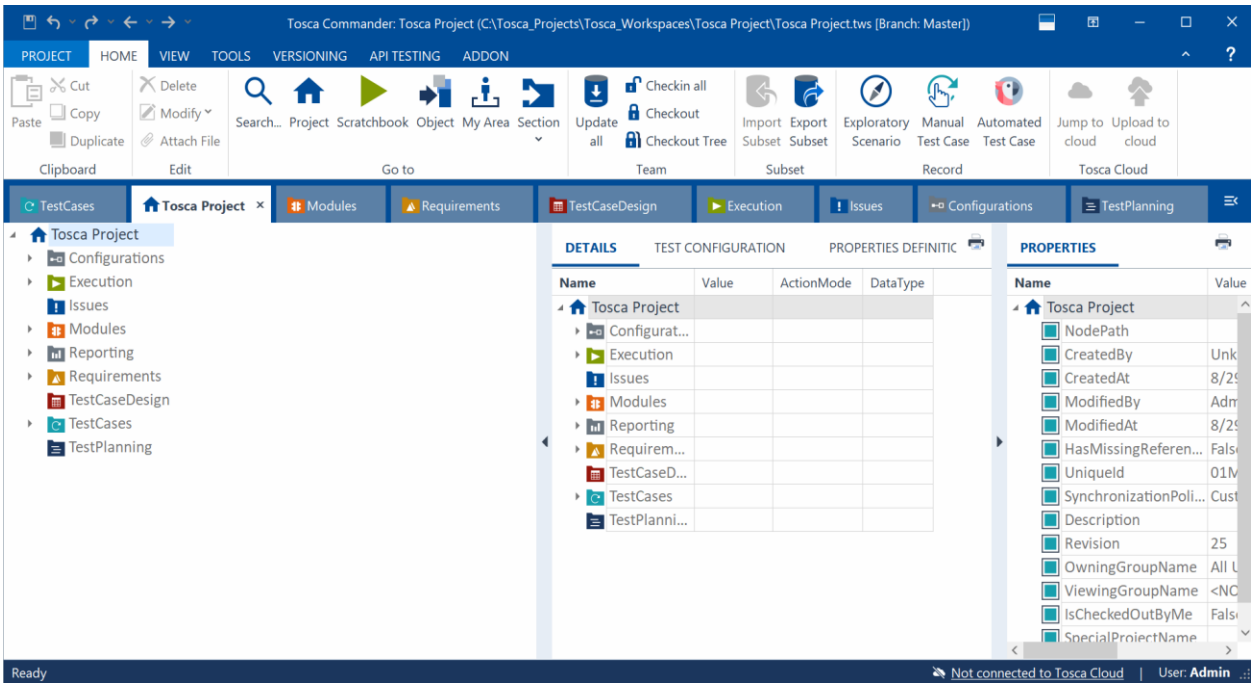

7. Now download the ToscaAgenticTestAutomation-1.4.4.msi file from Tricentis Support portal by raising a service request.

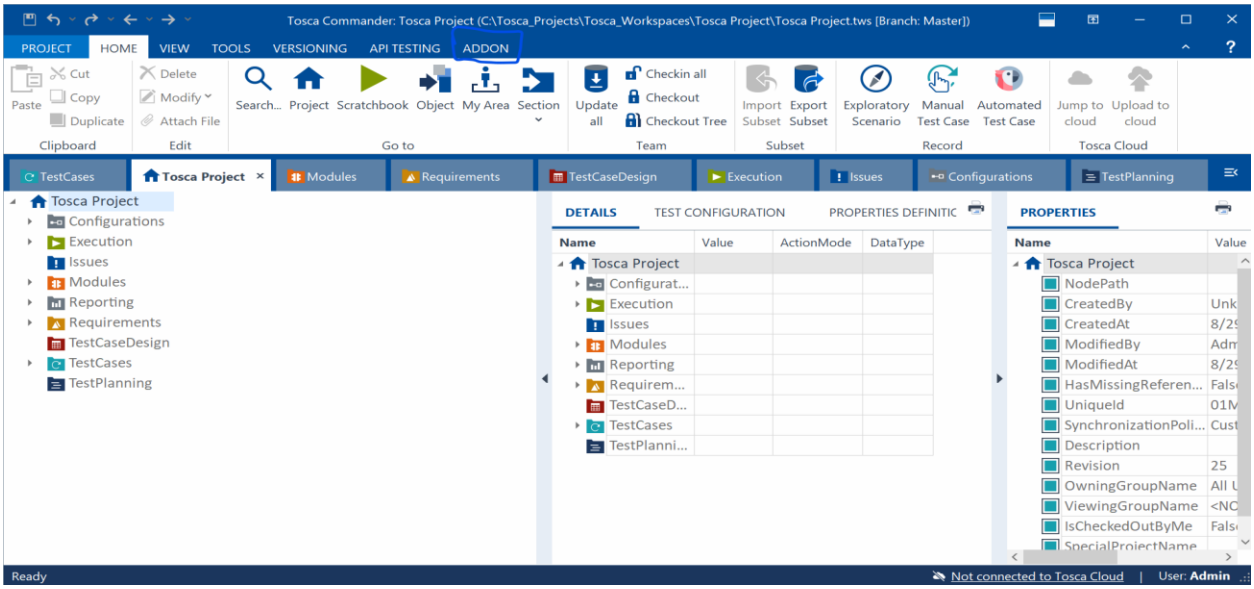

Download the msi file and then double click to install it.

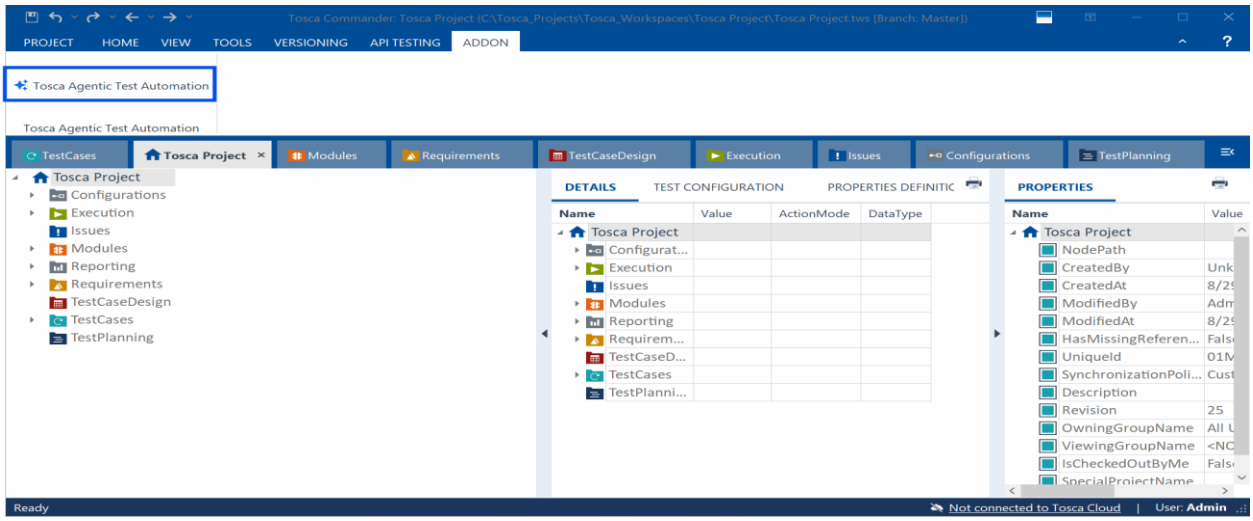

8. After installation, login into On-Prem Tosca Commander workspace.

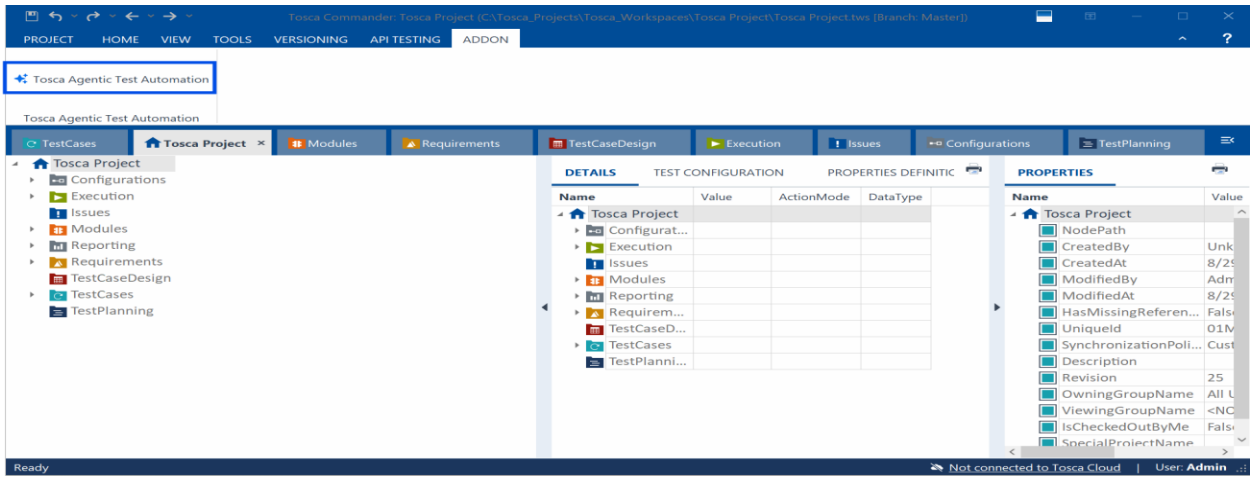

9. Click on the ADDON tab in the top ribbon

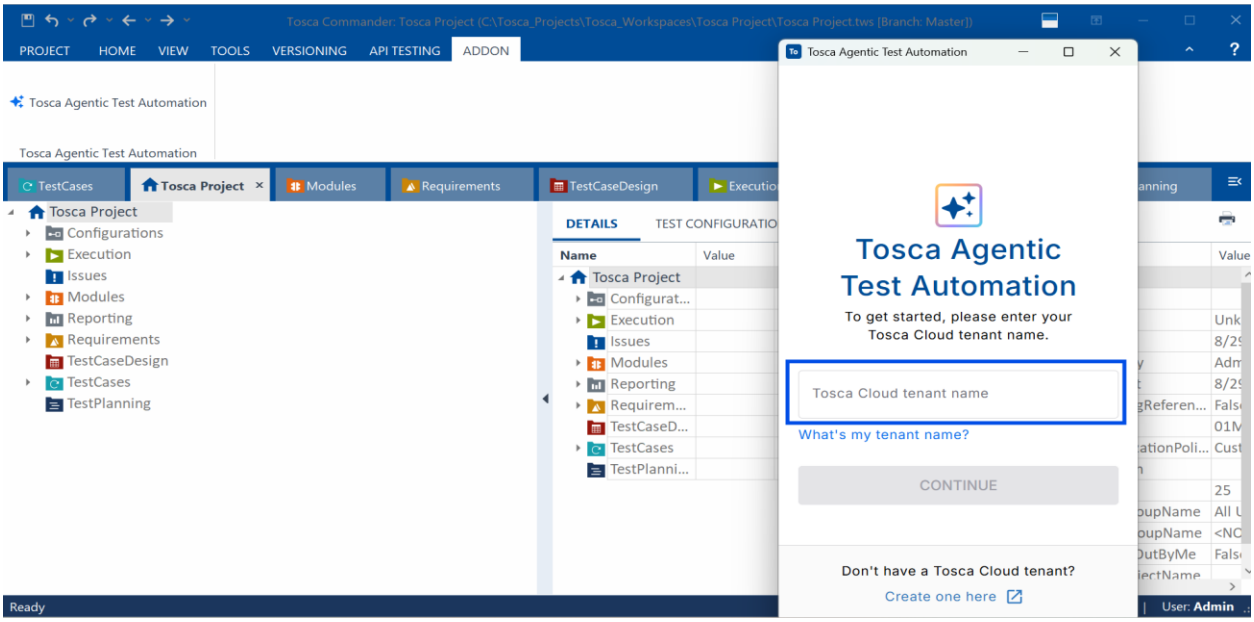

10. Tosca Agentic Test Automation section is displayed under ADDON tab

11. Click on Tosca Agentic Test Automation section

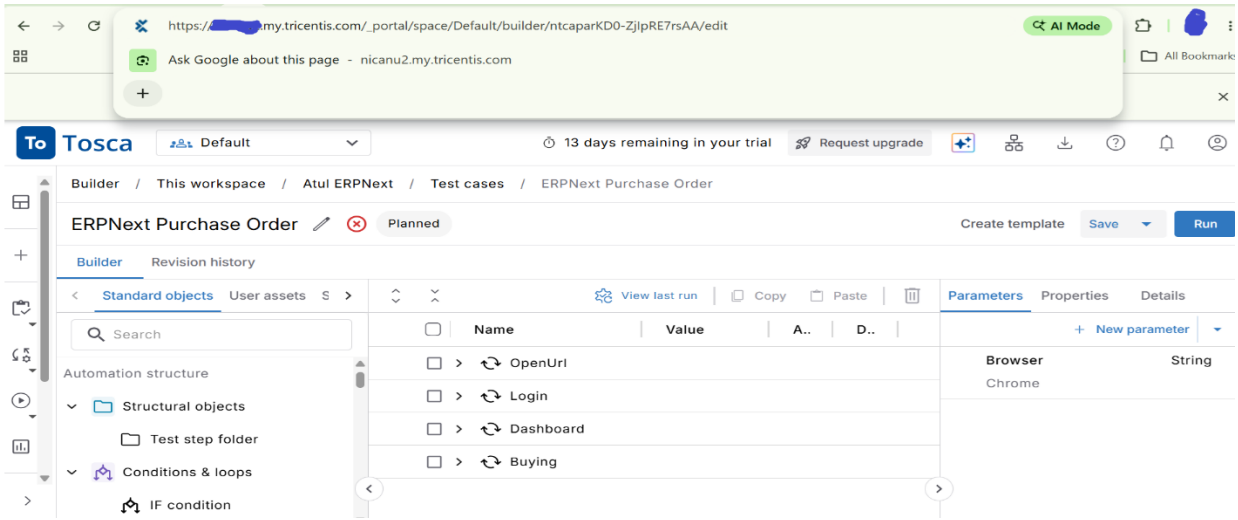

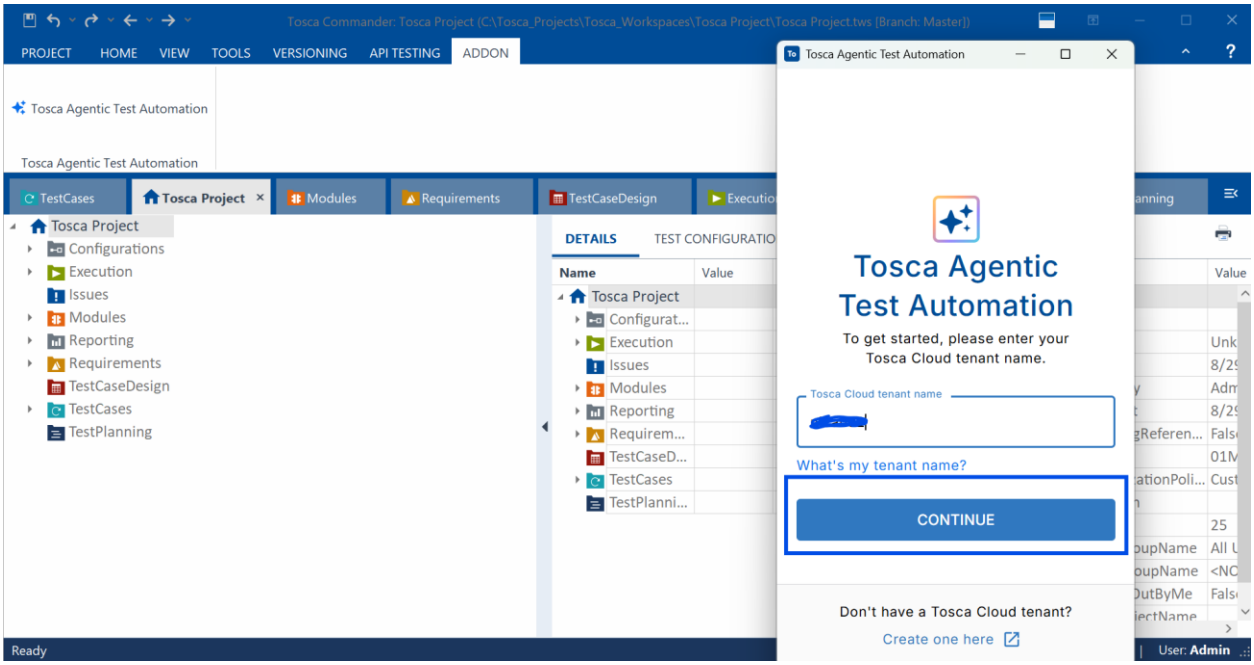

12. Tosca Agentic Test Automation window appears where we need to enter Tosca Cloud tenant name

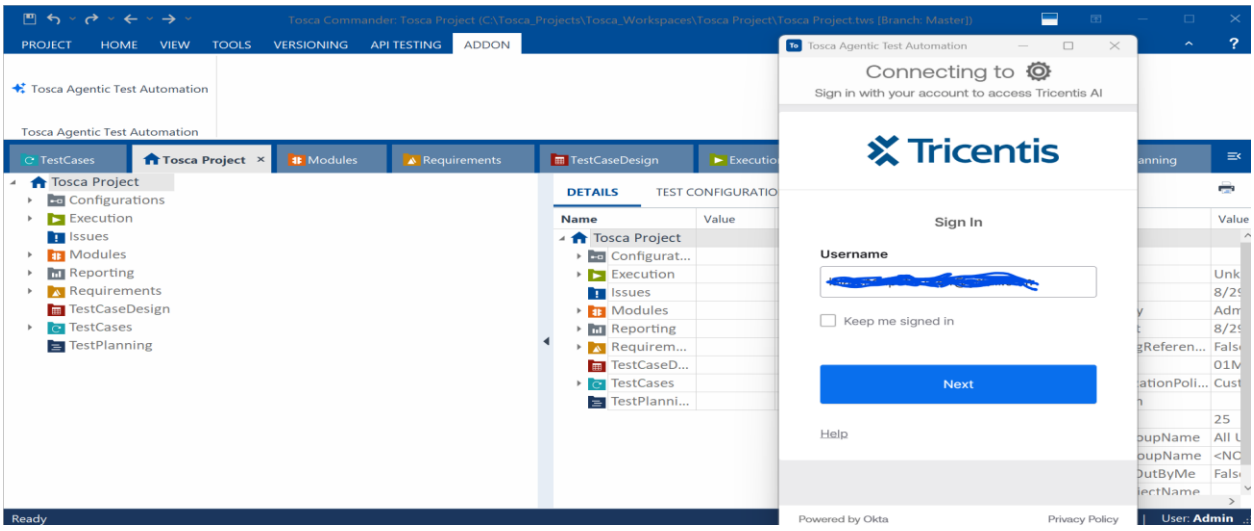

The tenant name is the variable part of your Tosca Cloud URL: **https://<your tenant name>.my.tricentis.com**

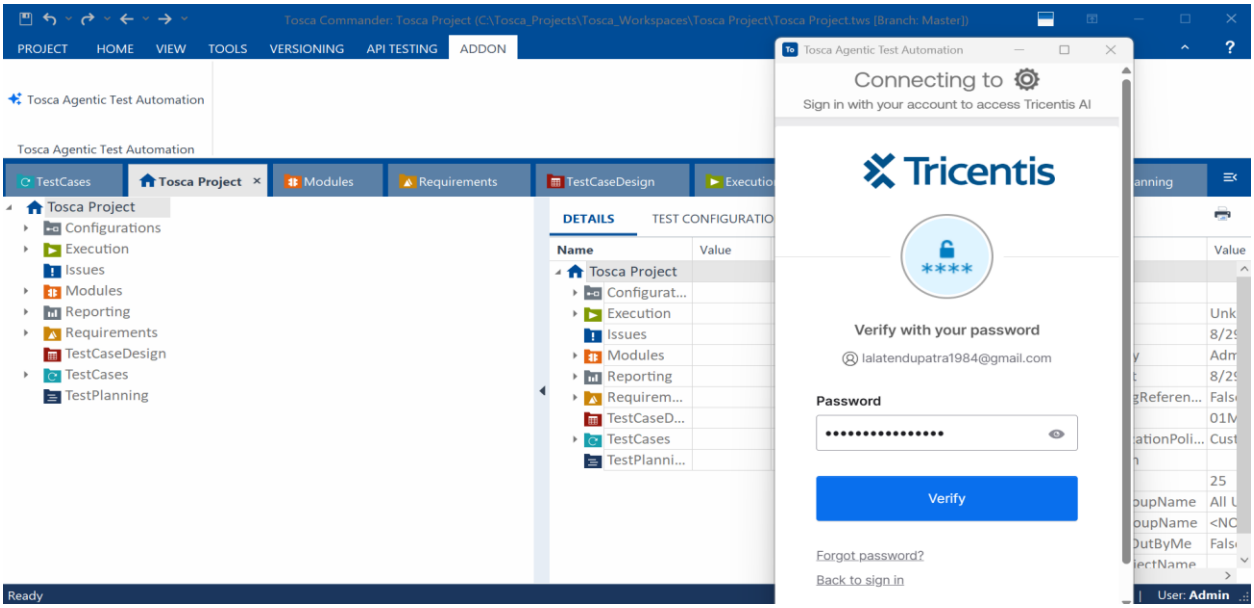

13. Enter the Tosca Cloud tenant name from the Tosca Cloud URL, in the Tosca Agentic Test Automation window and click on Continue

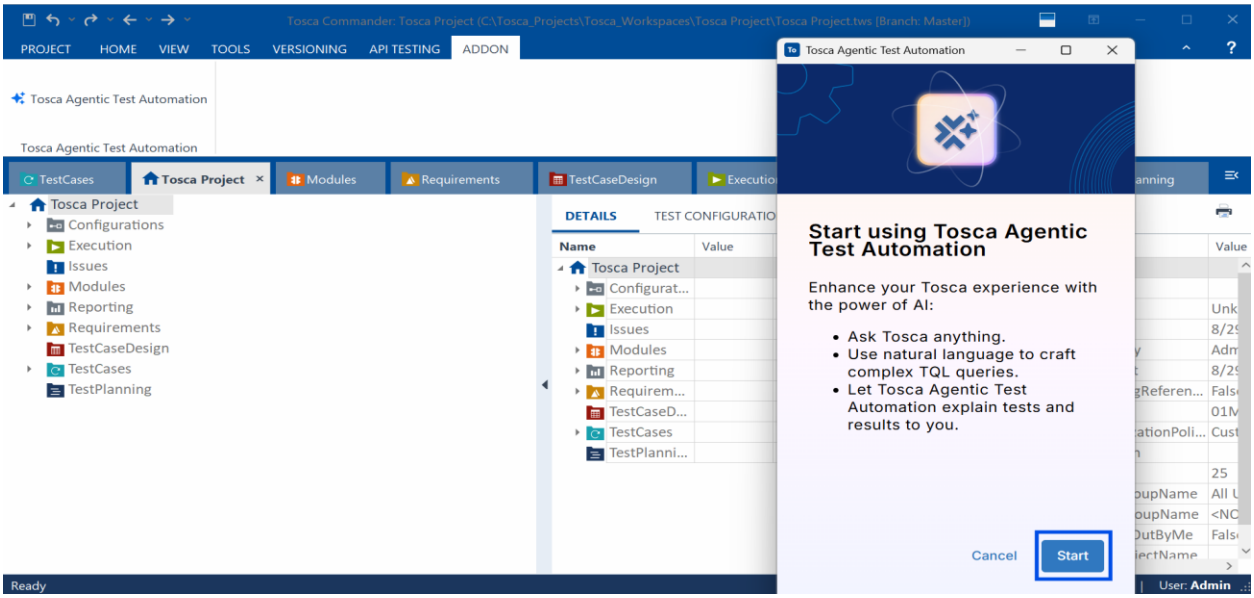

14. Enter your Tosca Cloud tenant name (User Name) and password with which you log into Tosca Cloud Environment in the Tosca Cloud sign in window displayed

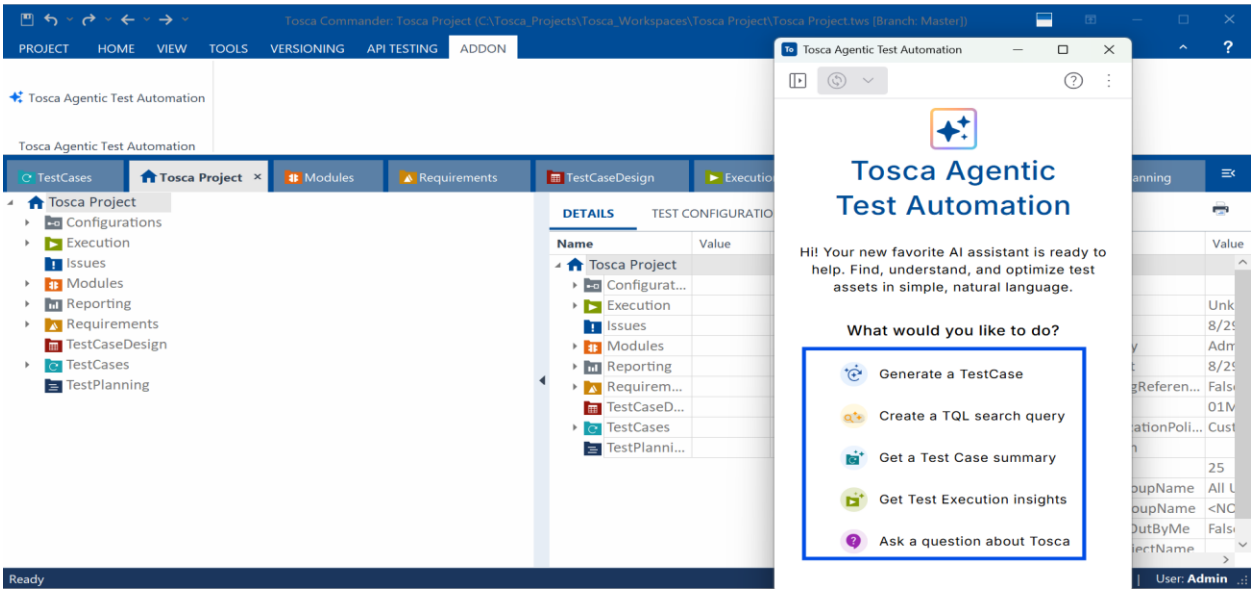

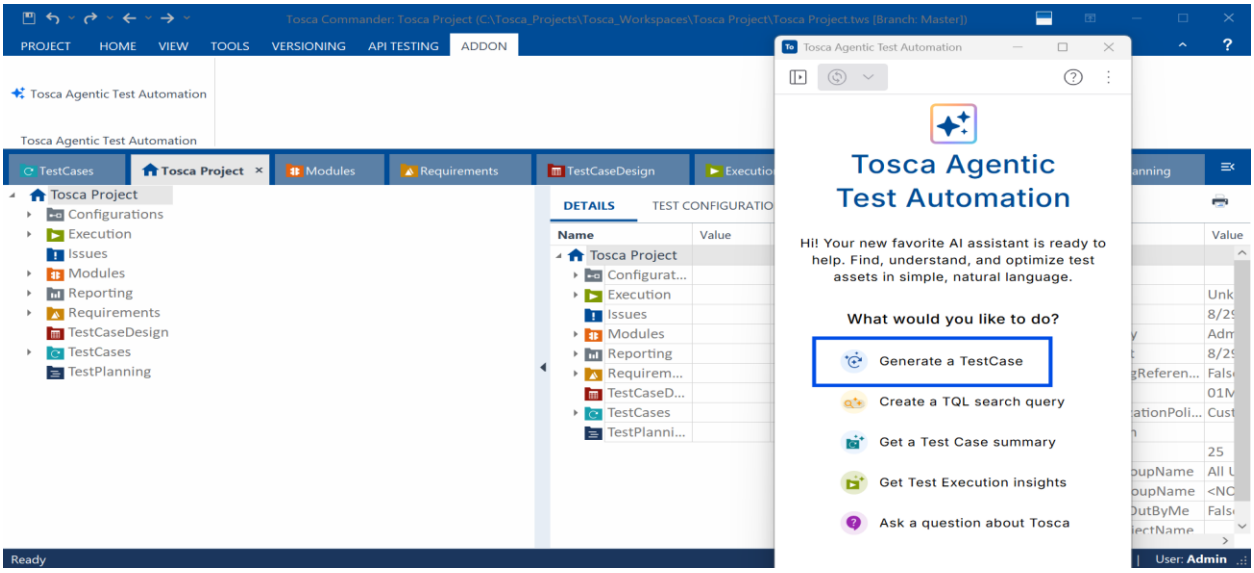

15. Tosca Agentic Test Automation is now ready to start. Click on Start

16. In the subsequent Tosca Agentic Test Automation screen we get multiple options to choose from as shown here

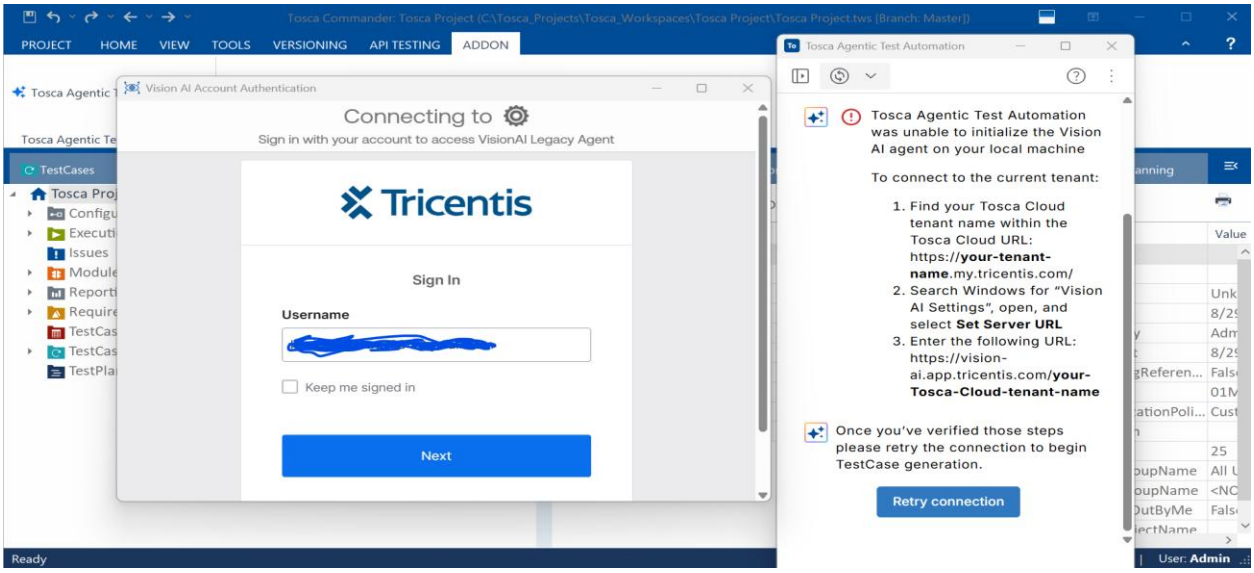

17. Consider choosing the option – Generate a TestCase

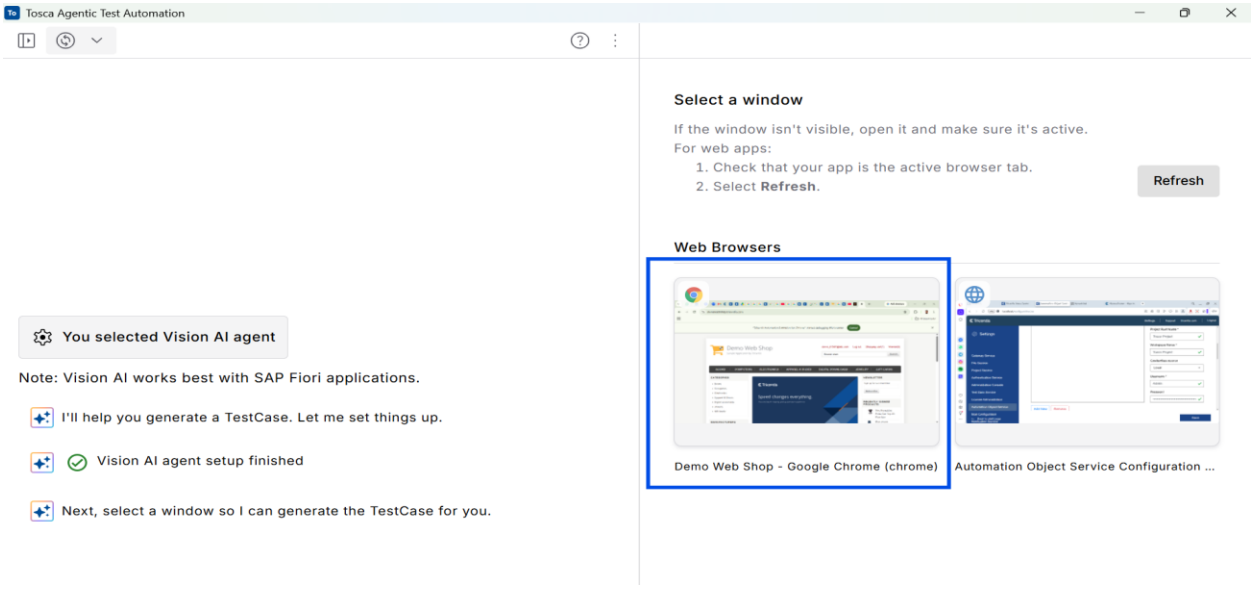

18. Enter your Tosca Cloud tenant name (User Name) and password again in the Tosca Cloud sign in window displayed.

    Please Note: Vision AI acts as the visual recognition and perception layer of Tricentis Tosca Agentic Test Automation, allowing AI agents to "see" and interact with user interfaces just like a human user. Agentic Test Automation generates complete test flows and scripts from natural language prompts, while Vision AI translates those intent-driven instructions into actual visual executions across the application screen.

19. Select a window to automate

20. Select Disable alert and No for the question – Is this an SAP Fiori application? I have special training to make automation more accurate for SAP Fiori

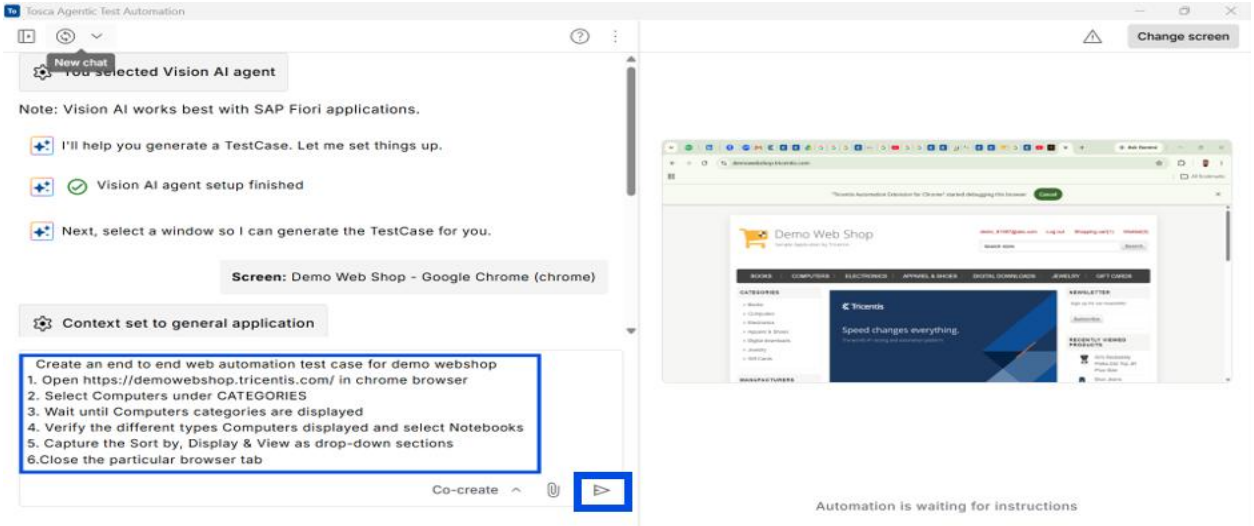

21. Either provide a simple one liner instruction or an elaborate sequence of instructions (test creation steps) in natural language into the prompt editor window

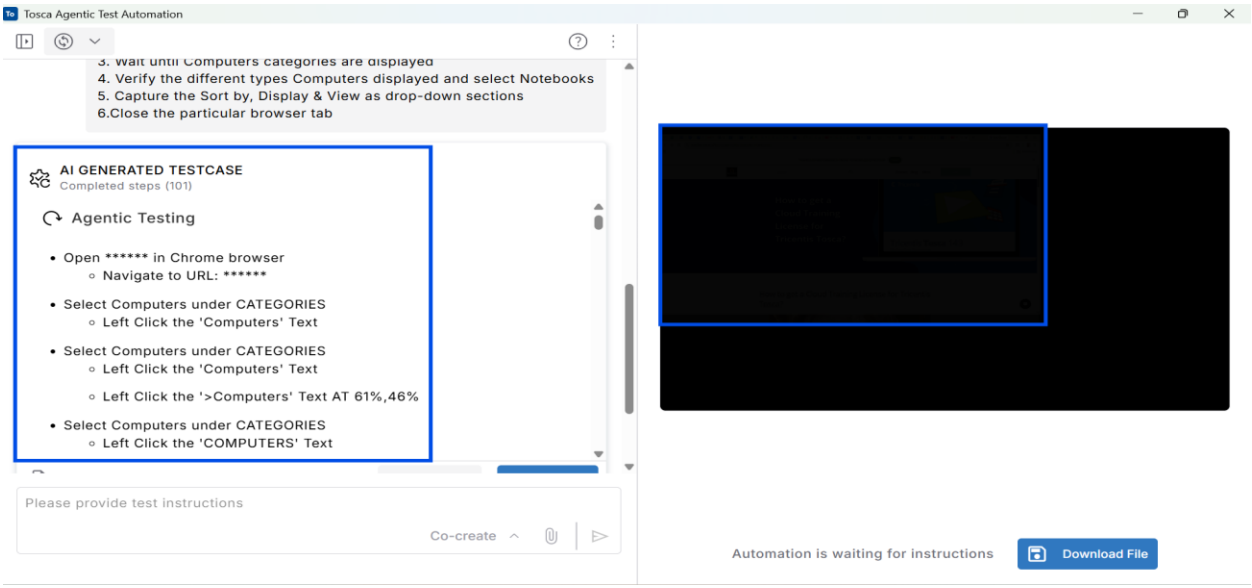

<u>Sample Prompt:</u>

Create an end-to-end web automation test case for demo webshop.

- Open https://demowebshop.tricentis.com/ in chrome browser
- Select Computers under CATEGORIES
- Wait until Computers categories are displayed
- Verify the different types Computers displayed and select Notebooks
- Capture the Sort by, Display & View as drop-down sections
- Close the particular browser tab

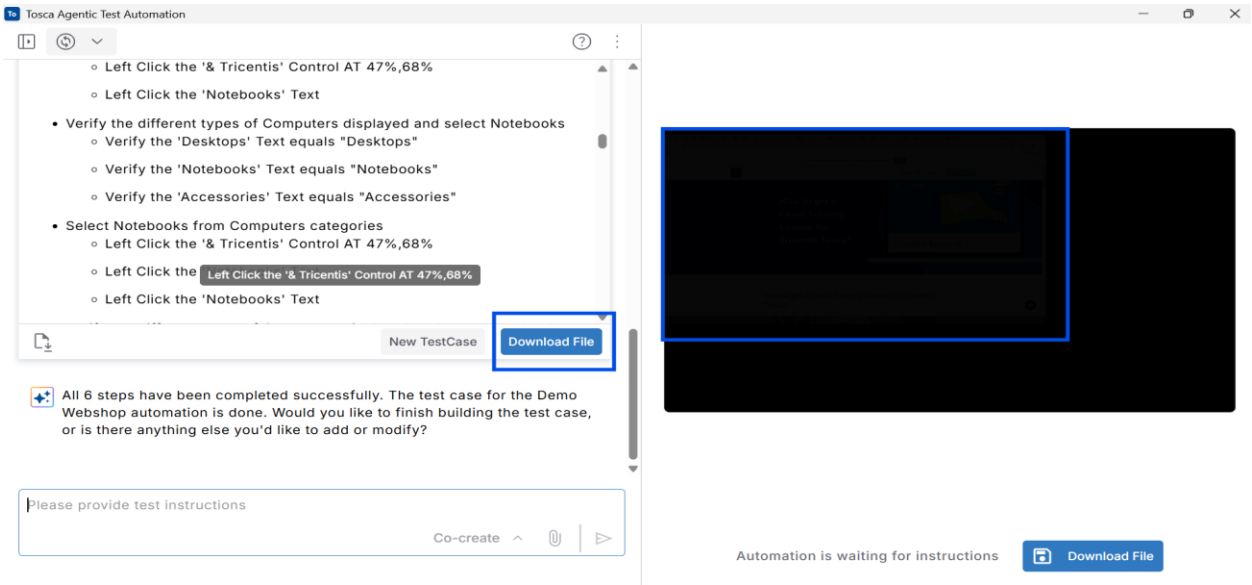

22. Tosca Agentic Test Automation reads through the instructions in the prompt taking aid of Vision AI and starts creating the test case. AI Generated Test Case getting created

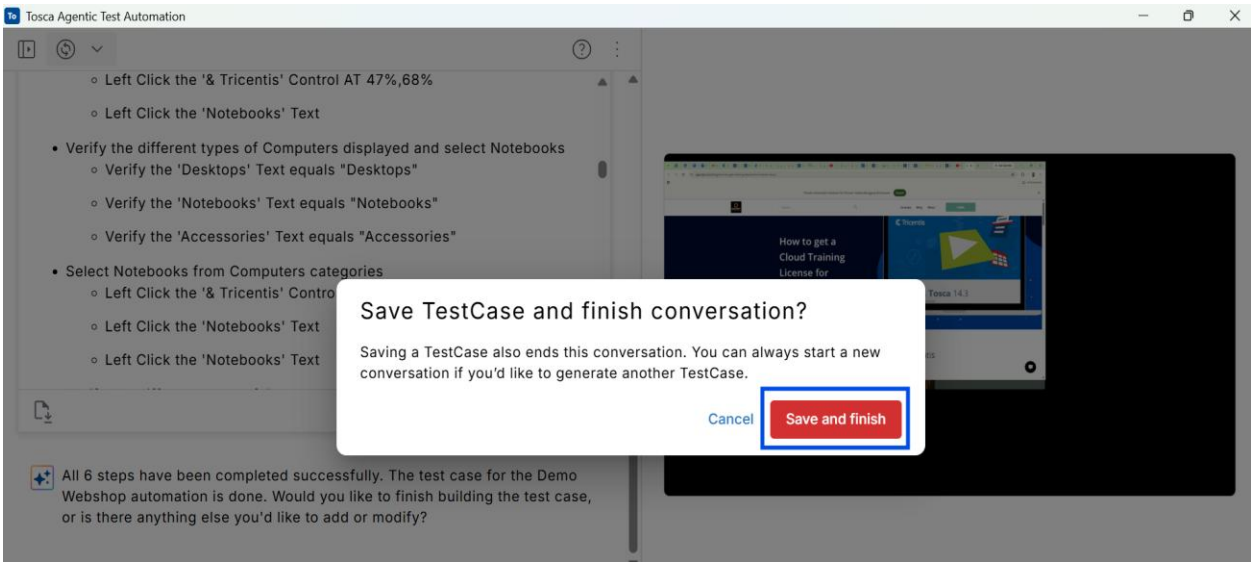

23. Once Tosca Agentic Test Automation has finished creating the test case, it will provide a short summary of what it has completed till now, waiting for your next instruction like whether you want to finish building the test case, add additional instructions, modify anything etc.

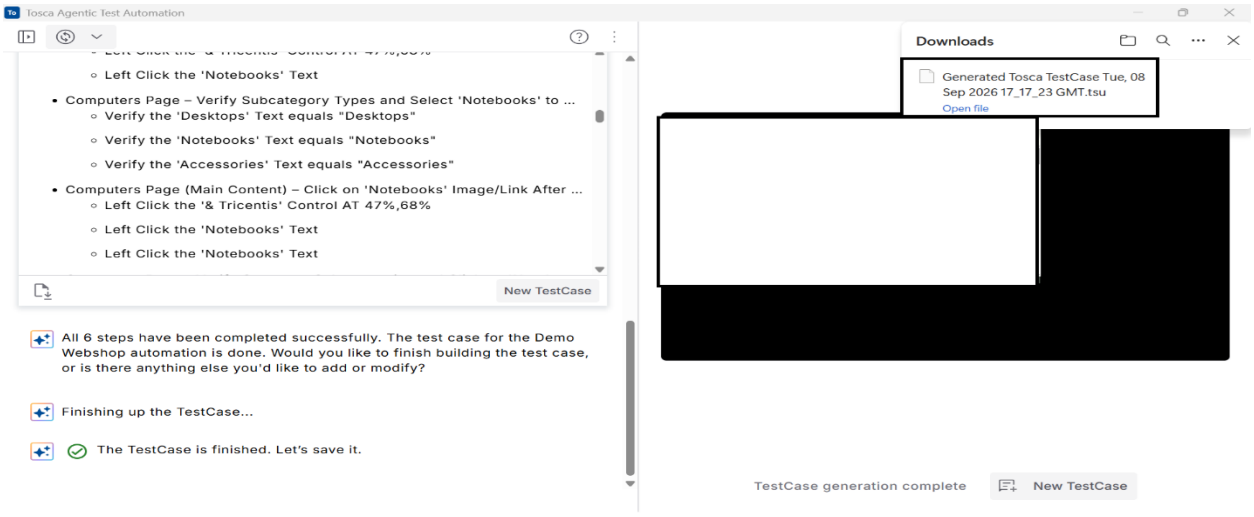

Click on Download File to complete test case creation

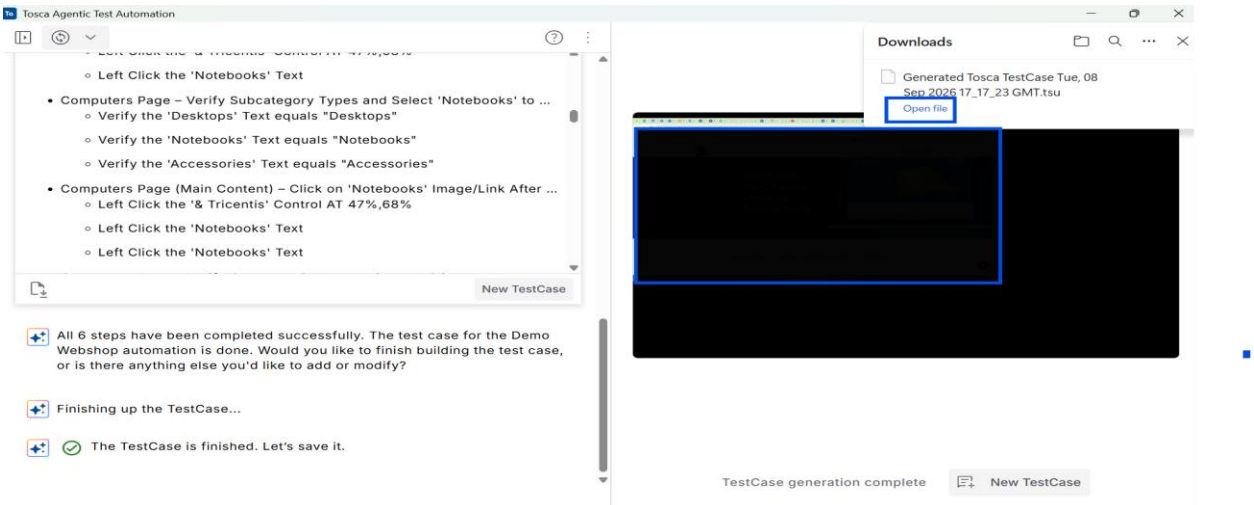

24. Click on Save and finish to complete test case saving. The Test Case is saved as a .tsu extension file in Downloads section by default

25. Click on Open file to view the created test case

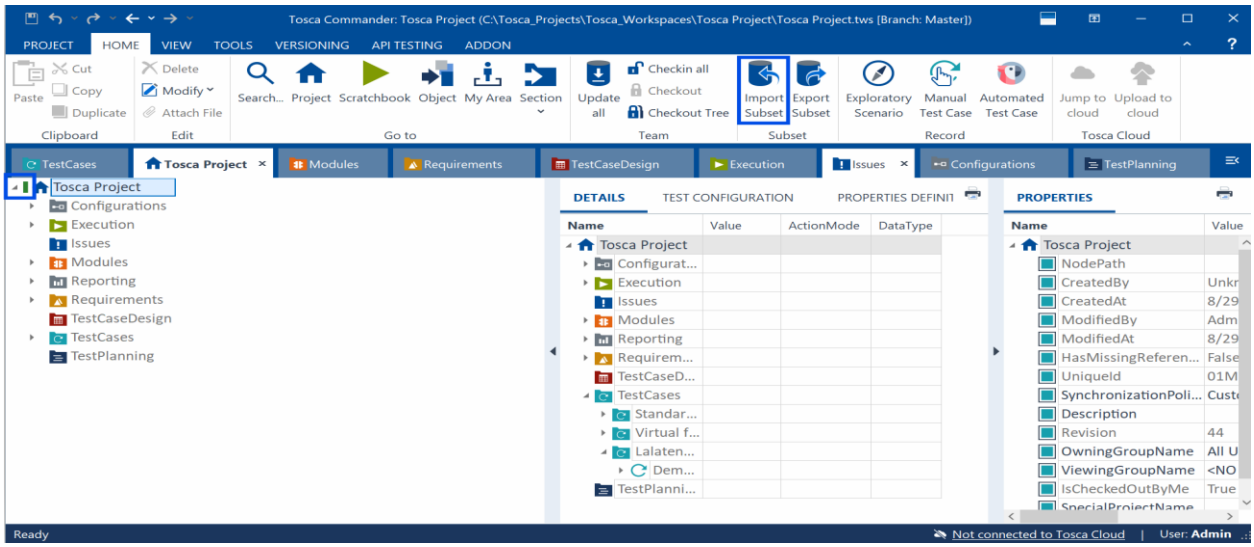

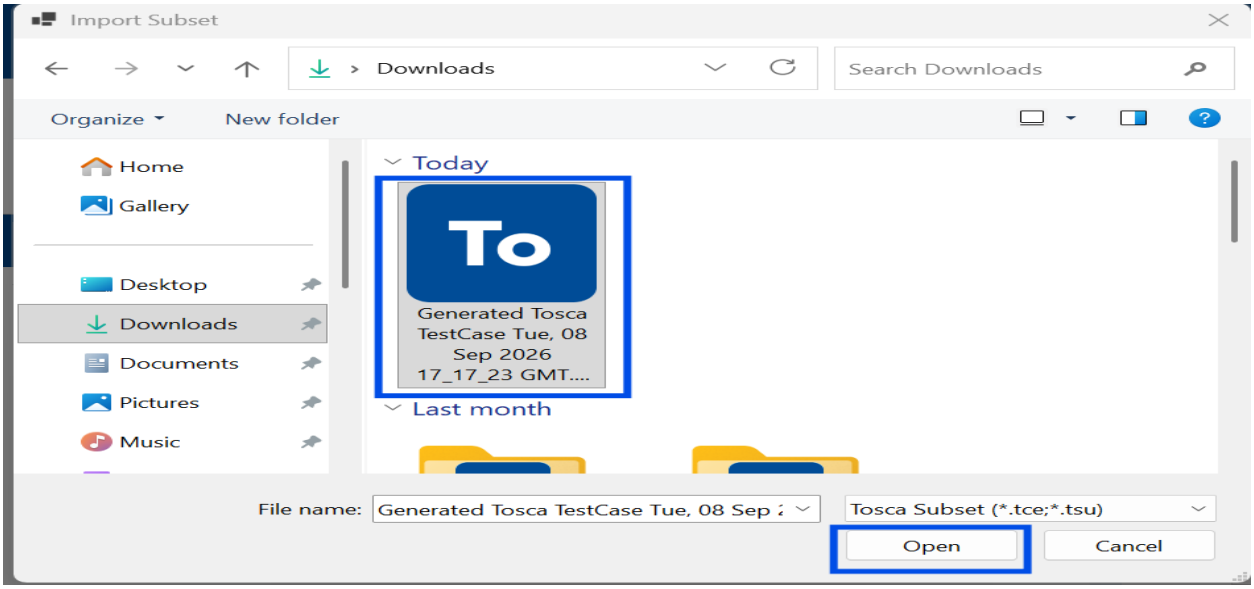

26. Import the .tsu file into Tosca Commander

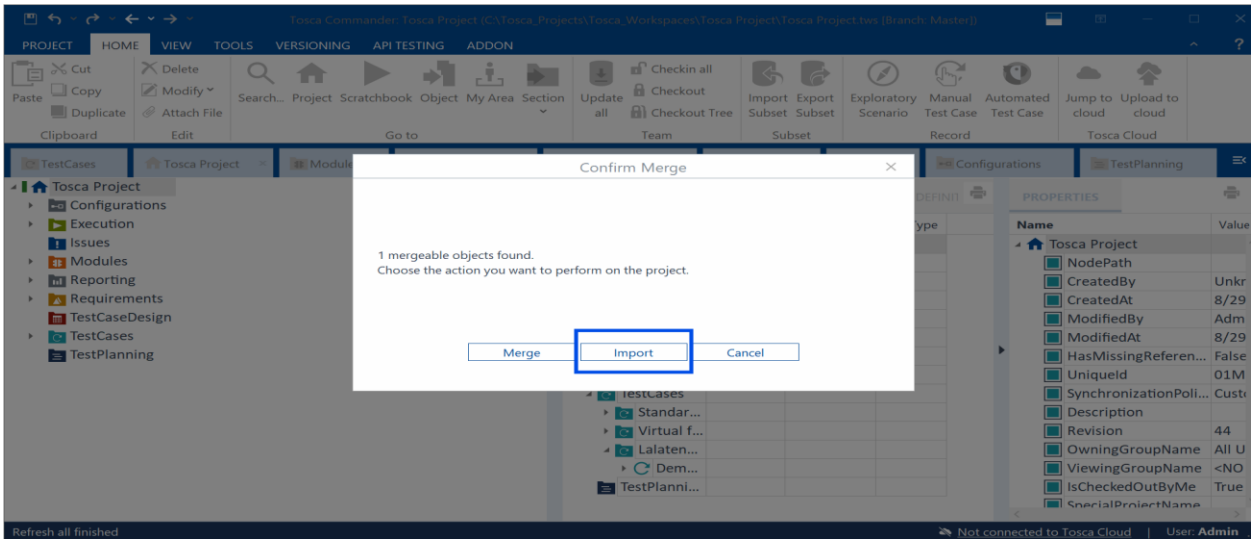

27. In Tosca Commander On-Prem first, check out the root project folder and then click on Import Subset

Select the particular .tsu file in browse window and click on Open

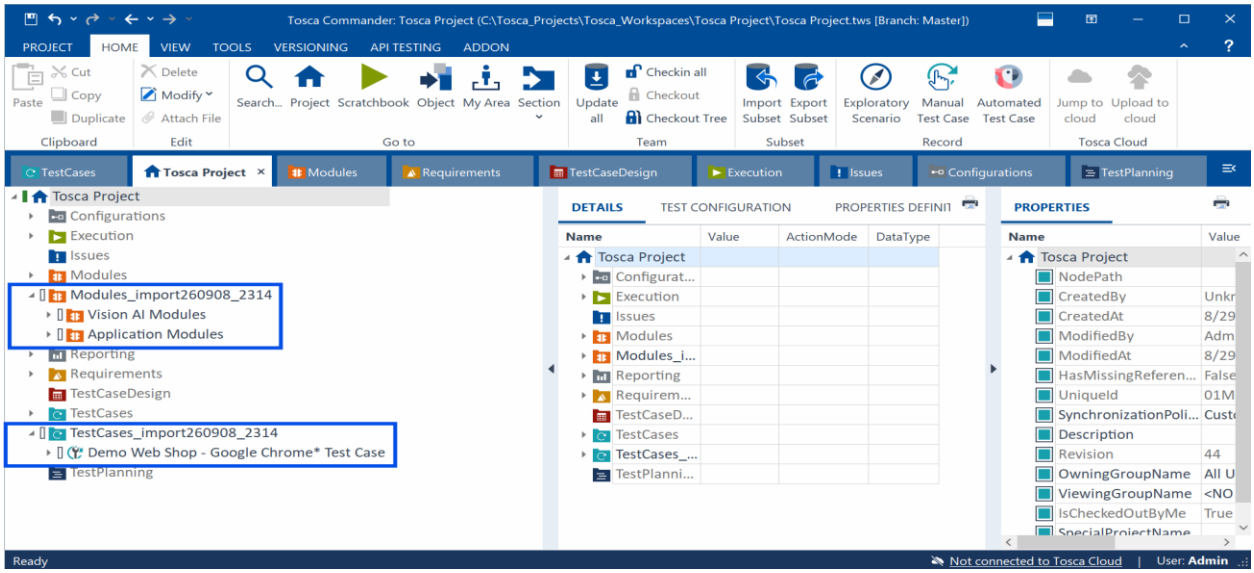

28. Select Import in Confirm Merge Window

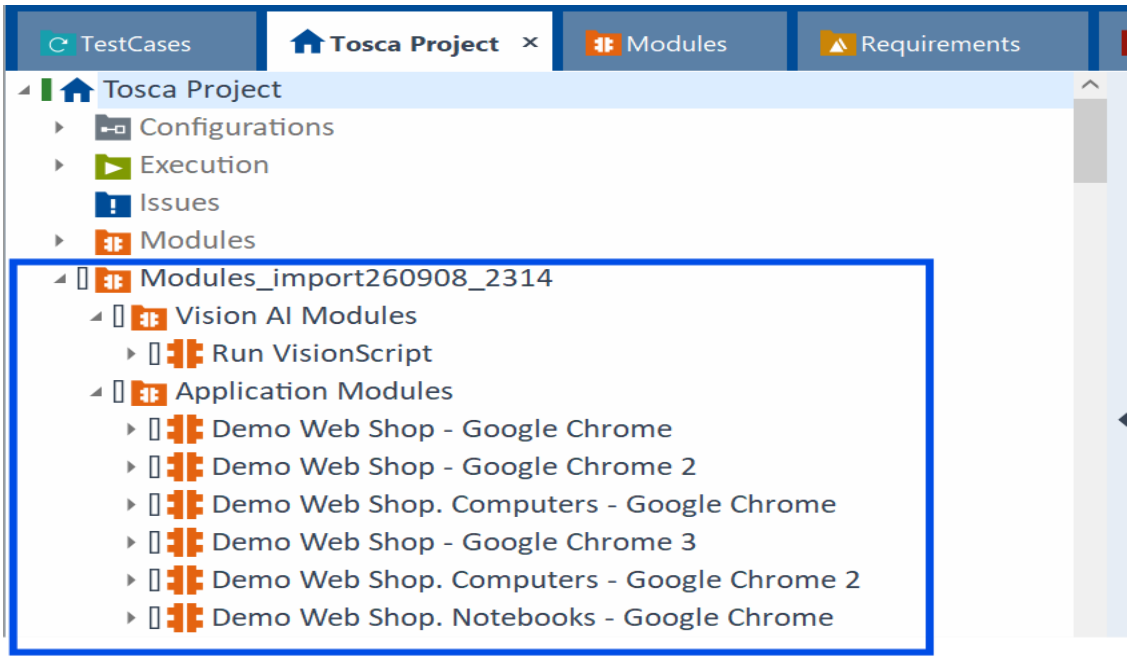

Please Note: Selecting Merge instead of Import will consolidate duplicate modules (Existing modules & new modules generated through Agentic Test Automation of same type) into a single module

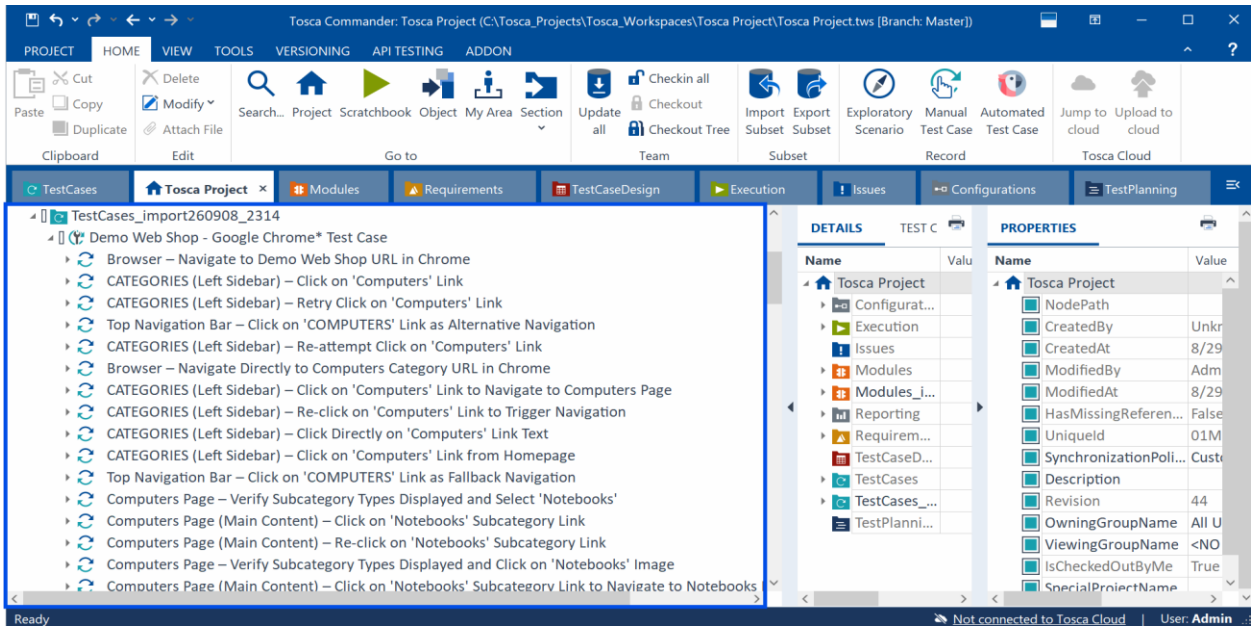

29. The created test case along with the modules created as part of it are imported

30. The list of modules imported

The test case with test steps imported

Please Note: The modules and test cases created through Tosca Agentic Test Automation may not be accurate. Hence, modules may require rescanning & test cases or test steps may require modification etc. to refine and fine tune them as per the exact functional flow.
